23. Problem: (use additional Sheets if necessary)
With approximately 24 custom code process running in one mode, the SUN systems are running out of sockets. The systems are set to hold the old sockets for 4 minutes. These connections need to be released quicker to be able to create new connections. The release interval time needs to be decreased to 30 seconds on all SUN servers. For example, the tool called EZ uses sockets to distribute the custom code and configuration. Once the install is completed, the operator must wait 4 minutes for the sockets to be released before another install is started. If a package is missed, the operator can't reinstall until this period has passed.

24. Proposed Solution: (use additional sheets if necessary)
Change the kernel parameter in /dev/tcp tcp_time_wait_interval from 240000 to 30000

25. Alternate Solution: (use additional sheets if necessary)
None

26. Consequences if Change(s) are not approved: (use additional sheets if necessary)
Will continue to get error messages when running custom code.
